

Key Uses

Complete Re-Epithelialization[†]

Preparation for Refractive Surgeries[†]

Corneal Cross Linking[†]

Epi-Clear is designed to assist with epithelial removal during procedures that **require preparation of the corneal surface**, including **refractive procedures, corneal cross-linking**, and other interventions requiring fast re-epithelialization[†].

The glide tip's micro-engineered surface utilizes **capillary action** to engage and **lift the epithelial layer in a controlled, consistent manner** to support surgical preparation.

[†] Based on peer-reviewed, clinical evidence published by Shetty et al, 2016, DOI 10.3109/02713683.2015.1045082.

About Us

Epi-Clear offers a controlled, efficient approach to epithelial removal for procedures that require a clear, stable surgical field. Whether preparing for vision correction, therapeutic intervention, or managing corneal surface conditions, Epi-Clear helps make this critical step simpler and more consistent.[†]

Our Strengths

Faster Re-Epithelialization^{††}

Intact Bowman's Membrane[†]

Less Pain^{††}

^{††} Based on peer-reviewed, clinical evidence when comparing Epi-Clear to mechanical debridement published by Shetty et al, 2016, DOI 10.3109/02713683.2015.1045082.

Epi-Clear – The Next Generation of Epithelial Removal

**Efficient.
Precise.
Reliable.**

Why Choose Epi-Clear?

- **Smooth, Layer-By-Layer Action:**
Designed to remove the epithelial layer in a controlled, even fashion for a consistent surgical field.
- **Simple & Intuitive Design:**
Lightweight, ergonomic, and easy-to-use handle — enables smooth operation across a wide range of cases.
- **Minimized Surface Disruption:**
Engineered to gently separate the epithelial layer while helping maintain the integrity of the underlying tissue.
- **Streamlined Workflow:** Quick setup and straightforward handling support procedural efficiency and surgical flow.

What Professionals Are Saying About Epi-Clear

**Dr. Marguerite
McDonald,
Island Eye
Surgicenter,
NY**

“With EBK™, patients not only had less pain and faster epithelial healing, but they also have a higher percentage of UCVA 20/20 or better.”[‡]

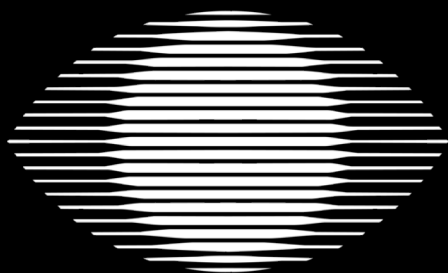

**Dr. William B Trattler,
Director of Center for
Excellence in Eye
Care, Miami**

“We made the change to EBK™ based on the faster epithelial healing and improved patient comfort.”[‡]

[‡]Individual results may vary. Based on personal clinical experience, not a controlled study.
