

CureSight[™]

Eye Tracking Based Digital Amblyopia Treatment

A Clear Future Ahead

About CureSight™

CureSightTM is an FDA cleared eye tracking based system designed for remote binocular vision treatment in pediatric patients (aged 4 to <9 years) suffering from amblyopia. The CureSightTM system is indicated for improvement in visual acuity and stereo acuity and to date it is the only method that was proven effective in a pivotal study against the gold standard patching in children.

CureSightTM is a **fun** and **engaging** treatment in which the child is being treated while watching any streamed content of choice at the comfort of his home, under the remote supervision of an eye care provider (ECP) and CureSightTM's Monitoring Center.

Binocular treatment

Eye-trackingbased real time image processing

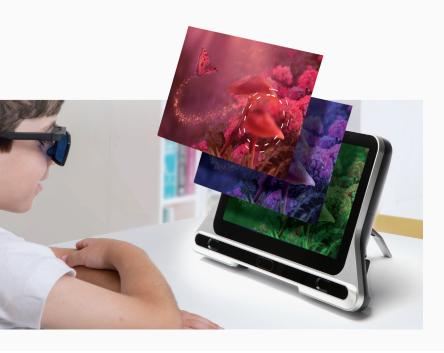

Remote monitoring

Home reatment

Proven in a large trial against gold standard patching

Any streamed content

The **Technology**

The CureSightTM's technology is based on embedded eye tracking sensors and novel image processing algorithms running in real-time.

The CureSightTM separates the visual content into two independent channels, enabling manipulation of the content to each eye individually.

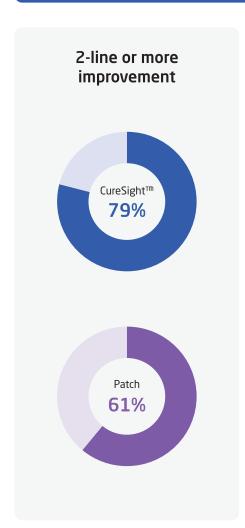

The CureSightTM system blurs the image corresponding to the center of vision of the dominant eye according to the severity of amblyopia, while keeping the rest of the image sharp. The blurring is done in real time according to the momentary gaze position of the dominant eye while the amblyopic eye receives a normal, sharp video stream.

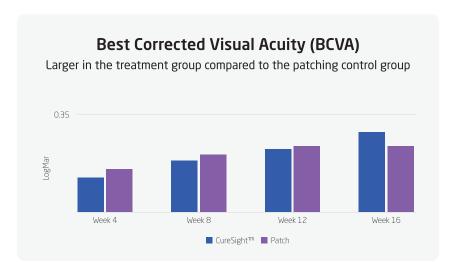

The CureSightTM system encourages the visual system to seek the sharp details from the amblyopic eye and integrate it simultaneously with the information from the dominant eye. This way, visual acuity in the amblyopic eye is improved, and with the two eyes working together, stereo acuity is enhanced.

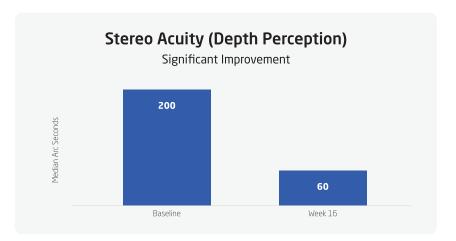

The CureSight™ system provides feedback to the eye care provider via a dedicated web portal including real-time remote compliance monitoring.

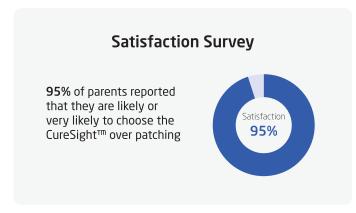

CureSight™ Topline Pivotal Study Results

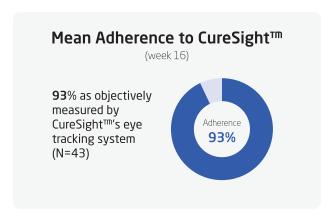

Non-inferior to gold-standard eye patch treatment Meeting the study's primary endpoint

- Randomized Controlled Trial against the gold standard patching
- 6 medical centers
- 103 participants aged 4 to <9
- Safety No serious adverse events were observed in either study arms

CureSight™ Funnel

The CureSight[™] treatment is covered through three unique category III CPT* codes (0704T, 0705T & 0706T) which refer to "Remote treatment of amblyopia using an eye tracking device" including a monthly physician remote patient monitoring code.

CureSight™ Monitoring Center

The CureSightTM's Monitoring Center, directed by practicing ophthalmologists and supported by a team of certified ophthalmic professionals and patient engagement specialists, provides an end-to-end education, engagement, and support services to both physicians and patients.
